

Conference Sponsors

Qwizdom

The elearning Alliance Scotland is delighted that Qwizdom is able to support this year's conference by providing the Audience Response Systems which will be integral to the discussions that take place throughout the day and the responses recorded will play a key role in the report that follows the conference.

Qwizdom's technology is designed to engage everyone in the audience, whether it be in the school classroom, the boardroom or the conference hall. Watch as your class or audience become inspired, engaged and motivated while using Qwizdom's handheld remote system.

The Company

Qwizdom is headquartered in Seattle, Washington, USA and Belfast, Northern Ireland. Qwizdom is committed to enhancing teaching, training and learning throughout schools and industry worldwide.

Dedicated to quality of service, Qwizdom places customers' needs first and strives to ensure exemplary service.

A team committed to excellence provides Qwizdom with a strong foundation as we continue to position ourselves as a leader in remote response technology.

[ecom Scotland](#)

The eLearning Alliance Scotland welcomes the contribution made by ecom Scotland in developing and maintaining the conference website and registration system.

The Company

eCom Scotland specialise in web & eLearning design, development & delivery.

Whether it is strategy, content creation or online assessment we focus on usability, sustainability and flexibility. Our key to success is focusing on your customer, student or client.

Need a non-technical solution? Our award winning products were designed for non-technical users. Our range of products are all tried and tested by small and large organisations.

Our follow up services provide:

- maintenance
- on-line marketing
- hosting & support
- design & animation

Company Background

eCom Scotland is a fully independent business supported by private and institutional financing following a MBO in 2001 by the current management. We were set-up in 1996 by Lauder College with European funding to develop on-line development facilities for itself & the Fife area. Thus e-learning has been a focus for eCom Scotland since 1996 and the company has grown up with the concept.

Why this makes us special

Our origins mean that we understand educational terms, concepts, and crucially how people learn. This means that our e-learning materials & tools are not just web-based, as we ensure they actually enhance the learning process.

We use our knowledge of learning design for websites too. Web sites are about customer self service, and as we use learning principles as a model when we design websites, you get the results you are looking for.

At Video3 we concentrate on two main products and services associated with delivering these products.

[Electern](#) is a new and very innovative broadband application for delivery of lectures, briefings and presentations either live or archived. The innovative part of the software is that these presentations are interactive permitting communication between viewer and presenter. The package includes video, slides, live chat, question and answer system, voting system and document download.

Although producing a presentation containing all of these elements is a very technical and complex matter, the electern interface has been designed for complete ease of use.

Electern will be featured at the eLearning Alliance Scotland Conference.

[Marratech](#) is an award winning broadband desktop conferencing system whereby several people can meet and collaborate via video, audio, whiteboard and application sharing. Web collaboration brings video conferencing to the Internet

Imagine holding meetings and video conferencing on the web, face-to-face, whenever you want. To talk, see each other and share applications and documents without being in the same room, the same building, or even the same country - that's exactly what Marratech® will do for you.
